

## HEALTH

This is one of the core intervention areas of IMVF, due to the importance of health issues in the development and well being of populations. Our action is promoted in liaison with public authorities, within a structured and sustainable framework, with a special focus on maternal and infant health and with the support of innovative telemedicine resources and means. The direct and indirect beneficiaries of our projects amount to more than four million people in several countries, in particular in Sao Tome and Principe, Guinea-Bissau and Angola.
